HAMA Blocking Reagent

Catalog number: A2010010
Lot number: 0119A0010
Expiration date: 03/31/2023
Package Size: 10 mg
Synonyms: Heterophilic Immunoglobulin Blocking Reagent
Purity: Affinity purified
Content: Proprietary blend of anti-HAMA proteins
Concentration: 2 mg/mL
Buffer: PBS 1x

Product Description: The presence in human serum of Human Anti-Mouse antibodies (HAMA) is a major concern in immunoassays. Indeed, HAMA are often associated with inaccurate results and false positives because they can bind to both capture and detection antibodies and can generate non-specific immunoassay signals. The provided HAMA Blocking Reagent specifically binds to HAMA, minimizing their interference and significantly reducing the number of false positives. Simply spike our HAMA Blocking Reagent into your immunoassay reagent to 5-50 µg/mL (optimum concentration is assay dependent).
