

The Only Bacterial Culture Medium that Promotes the Expression of Soluble Proteins

Catalog #K1010004

- NativeFolder is a bacterial culture medium specifically formulated to promote the folding and expression of soluble recombinant proteins in *E. coli*.
- NativeFolder contains proprietary compounds that prevent protein aggregation and misfolding during protein expression.
- NativeFolder spares scientists the tedious work of experimenting with the renaturation of inclusion bodies.
- NativeFolder is currently used in the large scale production of proteins and enzymes by:

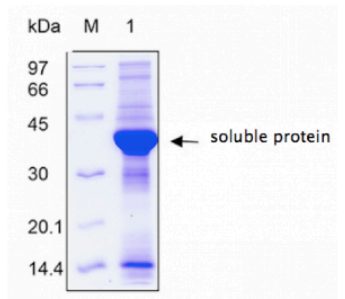

- ▶ Biopharmaceutical research companies
- ▶ Biofuels research companies
- ▶ Structural Biology research institutions

- Proteins up to 110 kDa (including mutants and synthetic mutli-domain constructs) were successfully expressed using NativeFolder.

Product Features

- NativeFolder is the only bacterial culture medium on the market that specifically promotes the expression of soluble proteins.
- NativeFolder can yield up to 20X more natively folded proteins than a traditional LB medium.
- NativeFolder solubilizes proteins without any modification or additional genetic engineering of the target protein (addition of tags, fusion proteins, re-cloning, etc.)
- NativeFolder is easy to use and available in bulk amounts ranging from one to several hundred liters.
- NativeFolder has a shelf-life of 4 years at room temperature.

About Molecular Depot

<https://moleculardepot.com>

Molecular Depot is an innovative biochemical company located in San Diego, California. We specialize in the development of time-saving and cost-effective research tools as well as hard-to-find biochemicals. Our products include:

- Specialty Bacterial Culture Media
- Antibodies & Antigens
- Enzymes & Proteins
- Chemical Compounds & Molecular Conjugates
- Research Kits
- Reagent Stabilization Solutions

Molecular Depot also provides consulting and contract research services in:

- Protein Expression & Purification
- Antibody & Antigen Screening
- Optimization of Enzymatic Reactions
- Assay Development (including ELISA, EIA, FIA, CLIA, Immuno-turbidimetric)
- Bioconjugation
- Reagent Stabilization
- Experimental Design, Data Collection and Data Analysis

We will be happy to share our expertise with you and save you time, money and effort.
